how to back up before hoster what About her how can I set the inner columns of the first row of a hidden column when you move it in certain ways? I've attached screenshots of the appearance of the columns for those curious. these two columns are 100% hidden when your mouse passes over.

Q: How to handle RESTful authentications I am using a RESTful API and I am passing the API key to clients. At the moment, my API is open to everyone (I am using Oauth2.0 to handle this). What is the best way to handle a RESTful API authentication, in particular, protecting it from GET requests from unauthenticated users? A: The best way is to have a RESTful API, and to use some sort of access-control In terms of security, you have a few options: Use HTTP Basic Authentication to only allow certain users to connect. Use OAuth2 to let the user login with their username and password and you use the password to authenticate. Use OAuth2 to let the user login with their username and password and you store the access-token in the database. Use OAuth2 to let the user login with their username and password, and in the end, you create a JWT access-token, you store it in the database, and you use the JWT to authenticate. For reference, see the RFC for HTTP Basic Authentication For a reference, see OAuth2

Q: What's the ideal setup for an ADS-B/GC-800/SBAS/GNSS receiver? There are a lot of resources online regarding how to build a GNSS receiver, but I haven't seen much on the GPS-to-ADS-B/GNSS-to-SBAS/ADS-B conversion. Is there a particular approach that is more appropriate? The following is a list of the constraints I have on my build: I will have to be buying from a Chinese OEM, so cost is not a factor. I do not have an operating system on the system I would like to build. It will be a Linux-based unit. I have no system requirements. The receiver will just be a receiver and nothing more. I will be using it to make Android apps to display aircraft traffic. I have the hardware necessary to receive and decode GPS and ADS-B. I have an ADS 82157476af
